Marcelo de Oliveira Santos

QA Tech Lead | Quality Engineering & AI applied to QA | Test Strategy & Automation (E2E, API, Performance) | Team Leadership
Greater Florianopolis

Summary

I've been working in software quality since 2009. I started by testing CRM systems and telephony platforms, moved into test automation around 2016, and for the past several years I've led QA teams. Today I'm a QA Tech Lead at Venturus, leading five quality analysts on two projects for a major US manufacturer. A big part of my job is test strategy. On one of these projects, the suite had more than 4,000 E2E tests and fewer than 2,000 unit tests, and the pipeline took about four hours to run. We moved most of that coverage to unit and API tests, split the E2E runs into parallel pipelines, and cut the run time to around 35 minutes, while increasing overall coverage by more than 20%. I also built a tool that reads the API documentation and generates the base of the test project. With it the team went from zero to over 400 API tests, which caught more than 20 critical bugs that manual testing had missed. Over the past year, I've put a lot of effort into bringing AI into the team's daily work. We built skills and agents that draft acceptance criteria and test cases, write automation scripts and investigate pipeline failures, and the repetitive part of our work now takes about 80% less time. The people side matters to me as much as the technical one. I've built QA teams from scratch, I hold regular 1-on-1s, and three people on my current team have been promoted. At Venturus, I also rewrote the technical evaluation used for every QA analyst in the company. Before that, at Ailos, I designed the automation framework that became the standard for more than 20 projects. I work mostly with TypeScript, Playwright, Cypress, Jest, REST Assured, JMeter, and Artillery. I'm based in Florianópolis. Portuguese is my native language, I use English every day with a US client, and I have intermediate Spanish.

Experience

Venturus
4 years 4 months

QA Tech Lead
September 2025 - Present (1 year 3 months)
Florianópolis

Leading 5 quality analysts across 2 high-complexity international manufacturing-management projects for a major US-based manufacturer.

Key Impacts & Deliverables:

Test strategy & automation
- Built a framework that reads API documentation (OpenAPI/Swagger) and generates the automation structure with health-check and contract tests (Jest + TypeScript): 0 → 400+ API tests, uncovering 20+ critical bugs missed by manual testing
- Rebalanced the test pyramid: from 4,000+ E2E and <2,000 unit tests to 4,000+ unit and ~500 E2E tests, plus 300+ new API tests — raising overall coverage by 20%+
- Restructured E2E pipelines with parallel execution on dedicated pipelines: ~4h → ~35min
- Created an API performance testing framework with Artillery (100+ scripts)
AI in the QA workflow
- Rolled out an AI skills & agents workflow from scratch: acceptance criteria, test cases, UAT documentation, front-end/back-end automation scripts and coverage gap analysis — 80% less time on repetitive tasks
- Built a pipeline-failure agent that identifies the root cause, fixes the tests, and pushes the fix
- Agents for exploratory and guided testing, escaped-defect analysis, history-based QA estimates, and corrective actions for externally reported bugs
Organizational impact (QA community of ~80 analysts)
- Led the rollout of JMeter performance testing (150+ scenarios), de-risking a legacy-to-new system migration
- Restructured the company-wide QA technical evaluation: 36 → 17 criteria, with refined descriptions and minimum weights by seniority
- Delivered 2 API testing trainings (Playwright + TypeScript)
- Created a biweekly knowledge-sharing session on best practices and AI, reaching 35+ QA analysts
- Led a 2-day AI initiative in which 36 QA analysts built AI solutions for daily project work.

QA Tech Lead
August 2022 - September 2025 (3 years 2 months)
Florianópolis, Santa Catarina, Brazil

Led a team of 4 quality analysts for a major US-based manufacturing company, owning quality workflows, processes, and each member's professional growth.
- Structured the test automation framework: front-end E2E suite with Cypress + TypeScript and API tests with Jest + TypeScript
- Grew the team: 3 promotions among direct reports (intern → junior, junior → mid-level, mid-level → senior)
- Presented sprint demos to stakeholders in English at the end of every sprint
- Kept production incidents close to zero over 3 years

Cooperativa Central Ailos
Test Automation Lead / QA Tech Lead
December 2020 - August 2022 (1 year 9 months)

- Team Building & People Management: Built and scaled a high-performing QA team from scratch, overseeing recruitment, onboarding, workflow definition, task management, and professional growth through regular 1-on-1s.
- Scalable Automation Framework: Designed and developed a complex, highly modular test automation framework supporting both E2E and REST API testing. Built with a resilient architecture to facilitate seamless framework migrations, this solution became the benchmark standard applied across 20+ automation projects.
- Corporate QA Strategy & Governance: Active member of the Enterprise Quality Committee, defining quality strategies, QA operational models, and leading RFP processes for vendor selection and quality services procurement.
- Scale & Impact: Drove testing standards and quality culture implementation that influenced and supported over 60 squads across the company.

Agriness
Software Test Analyst
October 2019 - December 2020 (1 year 3 months)
Florianópolis, Brazil

- Mobile Quality Assurance: Served as a Mobile QA Analyst, driving quality across company mobile applications from early planning stages through release and production deployment.
- Performance Testing Owner: Led the Performance Testing project, designing automated test scripts, integrating runs into CI/CD pipelines, and delivering analytical execution reports to identify system bottlenecks.
- QA Chapter & Automation: Collaborated closely with the QA Chapter to build and implement automated testing frameworks for REST APIs and User Interfaces (UI).

- Agile Process Improvement: Actively contributed to continuous testing practices within agile squads to ensure high product reliability.

InPhonex
Senior Test Analyst
February 2016 - September 2019 (3 years 8 months)
Florianópolis

- Test Automation & Quality: Designed and maintained comprehensive manual and automated test suites (E2E and REST APIs) for complex Telecom and VoIP platforms.
- Environment & IPBX Setup: Prepared, configured, and managed test environments, including IPBX telephone exchanges and cloud PBX systems.
- Integration Testing: Executed end-to-end integration testing between desktop software, softphones, and physical/virtual IPBX hardware.
- QA Metrics: Collected, tracked, and analyzed quality metrics to optimize QA team processes and drive continuous improvement.

AytyCRM
Test Lead / Quality Analyst
October 2009 - January 2016 (6 years 4 months)
Florianópolis, Santa Catarina, Brazil

- Leadership & Execution: Led testing activities across desktop CRM systems, IPBX dialer platforms, and web portals.
- Testing Types: Conducted acceptance, regression, stress/performance, and white-box testing.
- Test Design: Designed and structured comprehensive test cases and test scenarios.
- Environment Setup: Prepared and configured test and user acceptance testing (UAT) environments for software releases.
- Reporting & Metrics: Generated detailed bug reports, defect analysis, and QA execution metrics.
- Global Quality Assurance: Responsible for quality assurance and release testing for software distributed internationally.

Education
